Protein Sequence Searches - February 2005

All of the sequence databases on ABSS have recently been updated.

- Please note that the curators of the UniProt database have purged some temporary accession numbers from the most recent version of UniProt. These sequences have been assigned new permanent accession numbers. The new UniProt record may not contain the previous temporary accession number.
- If you encounter an accession number from an older search run against UniProt (results file extension .rup) that can no longer be found in the database, the permanent record with the new accession number can be found by searching the old accession number in the UniProt Protein Archive database (UniPARC) at:

http://www.pir.uniprot.org/database/archive.shtml

If you have any questions regarding this information or your results, please contact any STIC searcher.

When submitting sequence search results for scanning into IFW, please include a copy of this attachment to assist any future Examiners or members of the public who may encounter UniProt temporary accession numbers.

The primer sets can be used in antisense therapy and in gene therapy. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs casily without any specialised methods. AAH33166 to AAH33628 and AAH33631 to AAH38742 represent human cDNA sequences; AAB92446 to AAB93893 represent human amino acid sequences; and AAH3629 to AAH3632 represent oligonucleotides, all of which are used in the exemplification of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      010 A00 2002

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        0
```

The present invention relates to the use of expressed sequence tags (BSTs), or variants, of the unigene cluster HS169395 (HS1), HS127144

The present invention describes an isolated nucleic acid molecule, which comprises the sequence of any of the genes that are up-regulated or down

The EST sequences are useful as prognostic markers of survival of cancer pattents (high levels of EST-related mRNA are associated with a poor prognosis, specifically correlated with development of metastasds); and for diagnosis and/or therapy of solid tumours, particularly of colon, stomach and breast. The present sequence is a variant of the HS1 protein shown in the exemplification of the

                 Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                  778

The present invention describes primer sets for synthesising 5602 full-length cDNAs defined in the specification. Where a primer set comprises:
(a) an oligo-dT primer and an oligonucleotide complementary to the complementary strand of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the oligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end

The primer sets can be used in antisense therapy and in gene therapy. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs easily without any specialised methods. AAH03166 to AAH13628 and AAH13631 to AAH18742 represent human countries; and AAH13632 represent human amino acid sequences; and AAH13632 to AAH13632 represent human amino acid sequences; and AAH13632 to AAH13632 represent
The present invention relates to the use of expressed sequence tags (ESTs), or variants, of the unigene cluster HS169395 (HS1), HS127144

The BST sequences are useful as prognostic markers of survival of cancer patients (high levels of EST-related mRNA are associated with a poor prognosis, specifically correlated with development of metastases); and for diagnosis and/or therapy of solid tumours, particularly of colon, stomach and breast. The present sequer is a variant of the HS1 protein shown in the exemplification of the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Ş
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               밁
CC regulated in specific cancers (e.g. about 1031 genes up-regulated in CC acute lymphocytic leukemia). ACC72641 to ACC72860 represent cancer CC related gene nucleotide sequences which encode the proteins given in CC ABR58521 to ABR5879. Also described: (1) determining the presence or CC comprising a nucleic acid molecule described above; (2) an expression vector CC comprising the vector; (4) an isolated polypeptide, which is encoded by the nucleic acid; (5) an antibody that specifically binds the polypeptide of (4); (6) specifically targeting a compound to a pathological cell in a CC patient by administering to the patient the antibody above; and (7) a CC drug screening assay. The nucleic acid is useful as diagnostic markers or CC therapeutic targets. In particular, the nucleic acid is useful for CC therapeutic targets. In particular, the nucleic acid is useful for CC diagnosing a pathology, e.g. cancer (e.g. cancer of the bone marrow, CC bladder, brain, breast, cervix, colon/rectum, kidney, lung, ovary, CC pancreas, prostate, skin and uterus), wounds, ischaemia, heart diseases, atherosclerosis and endometriosis. The nucleic acid is also useful in CC carefulariae.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Query Match

The invention relates to 971 novel human cDNA sequences (ADC29919-CC ADC30889) and the polypeptides they encode (ADC30890-ADC31860). The cinvention also relates to nucleic acid sequences over 99% identical with CC the novel human cDNAs. The invention additionally encompasses expression CC vectors and host cells comprising a nucleic acid of the invention; the CC recombinant production of a polypeptide of the invention; an antibody CC against a polypeptide of the invention; and methods of polypeptide of the invention; and methods of polypeptide of the invention; and methods of identifying a compound which binds to a polypeptide of the invention. The CC invention further discloses methods of perventing, treating or amelical condition; kits comprising polynuclectide probes and/or monoclonal antibodies for carrying out the methods of the expression or activity of the polynuclectide and/or polypeptide, and 767 CC contig sequences corresponding to the cDNA sequences of the invention are cuseful in diagnostics, drug screening, forensics, gene mapping, in the CC identification of mutations responsible for genetic disorders or other CC traits, for assessing biodiversity, and in producting many other types of CC data and products dependent on DNA and amino acid sequences. They are CC disease and other neurodegenerative diseases, anaemia, platelet CC disease, and in the recombinant production of a protein. The polypeptides or CC cancer. The nucleic acids may also be used as hybridisation probes or CC cancer. The nucleic acids may also be used as hybridisation probes or CC cancer. The nucleic acids may also be used as hybridisation probes or CC cancer. The nucleic acids may also be used as hybridisation probes or CC cancer. The presents sequence of the protection. Note: The polypeptide are also useful in generating antibodies, as molecular weight markers, can also be also be also be also be acids and are represents a specifically conditions. The present directly from WIPO at Seguence 145 AΑ;

                                                                          Human PTH
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention relates to a method of characterizing acute myelogenous leukemia (AMI) in a patient by assaying for the overexpression of one or more BAALC transcripts in cells obtained from the patient, where an overexpression indicates that the patient has an aggressive form of AML. The methods, kits and probes are useful for characterizing acute or chronic myelogenous leukemia, or prostate cancer. They are also useful for detecting BAALC overexpression. This sequence corresponds to a BAALC (Brain and Acute Leukemia, Cytoplasmic) protein encoded by an alternative spliced RNA consisting of exons 1, 6 and 8.

The methods, kits and probes are useful for characterizing acute or chronic myelogenous leukemia, or prostate cancer. They are also useful for detecting BAALC overexpression. This sequence corresponds to a BAALC (Brain and Acute Leukemia, Cytoplasmic) protein encoded by an alternative spliced RNA consisting of exons 1, 6 and 8.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Characterizing acute or chronic myelogenous leukemia, or prostate cancer in a patient comprises assaying for the overexpression of one or more BAALC transcripts in cells obtained from the patient.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           09-NOV-2001; 2001US-0348210P
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 acute myelogenous leukemia; gene expression; BAALC; chronic myelogenous leukemia; prostate cancer; Brai

The invention relates to a novel PTH responsive gene (PAIGB) fragment CC construct comprising the isolated nucleic acid fragment operatively (CC linked to suitable regulatory sequences; a host cell transformed with the CC chimeric construct; a vector comprising the public acid fragment; obtaining a nucleic acid fragment encoding the polypeptide; a method for CC chaining a polypeptide; detecting the presence of the nucleic acid fragment; and antibody that specifically binds to one or more epitopes of CC a PAIGB polypeptide; a composition for regulating bone-forming activity (C) in a mammal comprising the nucleic acid fragment, polypeptide; a method for CC determining whether an agent altering expression of PAIGB mRNA; CC determining agents for effectiveness in altering expression of the nucleic acid fragment; subject; identifying polypeptides of a bone related disorders; evaluating the effectiveness in altering expression of the bone related CC disorder in a subject; identifying polypeptides capable of binding to CC pAIGB, monitoring the effectiveness of treatment of a subject with a bone CC paigness in altering expression of the muleic canimals and a second group of control canimals composed of the transgenic animal and a second group of control canimals, studying bone mass determinants; studying the modulation of bone mass; studying an effect of PAIGB on bone disorders; identifying not whether an agent which a slinked to an activation domain cC construct comprising multiple copies of DNA binding elements linked to a linked to a material promoter which is linked to paign whether an agent which is linked to an activation domain composition of paign generate linked to a construct observation domain of paign specifical inducer, transcription of paign generate linked to a construct observation domain which is linked to an activation of bone construct disorders by gene therapy. The nucleic acid is useful in celebrating a composition of the may be construct acid disorders, e.g., osteoporosis. This sequence represents
              New nucleic acid fragment encoding a PAIGB polypeptide, useful in preparing a composition for diagnosing, treating or preventing bone
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    WPI; 2004-420299/39.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            밁
cc encoding a polypeptide. The invention further comprises: a chimeric construct comprising the isolated nucleic acid fragment operatively cc linked to suitable regulatory sequences; a host cell transformed with the chimeric construct; a vector comprising the nucleic acid fragment; containing a nucleic acid fragment encoding the polypeptide; a method for containing a polypeptide; detecting the presence of the nucleic acid fragment; an antibody that specifically binds to one or more epitopes of cc a PAIGB polypeptide; a composition for regulating bone-forming activity in a mammal comprising the nucleic acid fragment, polypeptide or antibody a magent that alters the expression of PAIGB gene or polypeptide; cc determining whether an agent alters the expression of PAIGB mRNA; cc screening agents for effectiveness in altering expression of the nucleic acid fragment; screening for agents useful for treating bone related cd isorders; evaluating the efficacy of a treatment of a bone related cd isorders; monitoring the effectiveness of treatment of a bone related to PAIGB; monitoring the effectiveness of treatment of a bone related construction.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   SX

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              S
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               CC related agent; a transgenic animal comprising the DNA; an animal model CC for the study of bone density modulation comprising a first group of CC animals composed of the transgenic animal and a second group of control CC animals; studying bone mass determinants; studying the modulation of bone CC mass; studying an effect of PAIGB on bone disorders; identifying an agent CC for treating bone related disorders; identifying whether an agent which CC has bone forming activity; and a stably transfected cell line comprising CC linked to a DNA binding domain which is linked to an activation domain CC linked to a DNA binding domain which is linked to an activation domain CC construct comprising multiple copies of DNA binding elements linked to a linducer, transcription of PAIGB CDNA, where upon the addition CC construct inducer, transcription of PAIGB gene is induced. The PAIGB CDNA, where upon the addition of chemical inducer, transcription of PAIGB gene is induced. The PAIGB CDNA composition for dispnosing, treating or preventing bone CC used to treat disorders by gene therapy. The mucleic acid is useful in Creparing a composition for dispnosing, treating or preventing bone CC related disorders, e.g., osteoporosis. This sequence represents a PTH CC responsive gene protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Matches 121;

The methods, kits and probes are useful for characterizing acute or chronic myelogenous leukemia, or prostate cancer. They are also useful for detecting BAALC overexpression. This sequence corresponds to a BAALC (Brain and Acute Leukemia, Cytoplasmic) protein encoded by an alternative spliced RNA consisting of exons 1, 6 and 8.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Characterizing acute or chronic myelogenous leukemia, or prostate cancer in a patient comprises assaying for the overexpression of one or more BAALC transcripts in cells obtained from the patient.
                                                                 New polypeptide human dioxygenase 10.12 and polynucleotides encoding polypeptide, useful for treating various diseases, such as malignant tumors, inflammations, immunological diseases, hemopathy and HIV
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Sequence 149

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   recombination process to produce the polypeptide and antagonist age the polypeptide. The present invention also discloses the method of applying the polypeptide in treating various diseases, such as maltumours, inflammations, immunological diseases, haemopathy and HIV infection. The present sequence is the human dioxygenase 10.12.
                       overexpression indicates that the patient has an aggressive form of AML. The methods, kits and probes are useful for characterizing acute or chronic myelogenous leukemia, or prostate cancer. They are also useful for detecting BAALC overexpression. This sequence corresponds to a BAALC (Brain and Acute Leukemia, Cytoplasmic) protein encoded by an alternative
                                                                                            The invention relates to a method of characterizing acute myelogenous leukemia (AML) in a patient by assaying for the overexpression of one more BAALC transcripts in cells obtained from the patient, where an
                                                                                                                                                                             Characterizing acute or chronic myelogenous leukemia, c in a patient comprises assaying for the overexpression BAALC transcripts in cells obtained from the patient.
                                                                                                                                                                                                                                       N-PSDB;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Misc-difference

                                                                                                                                  The invention relates to a method of characterizing acute myelogenous leukemia (AML) in a patient by assaying for the overexpression of one or more BALIC transcripts in cells obtained from the patient, where an overexpression indicates that the patient has an aggressive form of AML. The methods, kits and probes are useful for characterizing acute or chronic myelogenous leukemia, or prostate cancer. They are also useful for detecting BALIC overexpression. This sequence corresponds to a BALIC (Brain and Acute Leukemia, Cytoplasmic) protein encoded by an alternative spliced RNA consisting of exons 1, 6 and 8.

CC encoding a polyapetide. The invention further comprises: a chimeric construct comprising the isolated nucleic acid fragment operatively construct; a vector comprising the mucleic acid fragment operatively containing a nucleic acid fragment encoding the mucleic acid fragment; construct; a vector comprising the nucleic acid fragment; cobtaining a nucleic acid fragment encoding the polyapetide; a method for cobtaining a nucleic acid fragment encoding the polyapetide; a method for cobtaining a polyapetide; detecting the presence of the nucleic acid fragment; an antibody that specifically binds to one or more epitopes of care a PAIGB polyapetide; a composition for regulating bone-forming activity cin a mammal comprising the nucleic acid fragment, polyapetide or antibody determining agents for effectiveness in altering expression of the nucleic acid fragment; screening for agents useful for treating bone related condisorders; evaluating the effectiveness in treating bone related condisorders; evaluating the effectiveness of treatment of a bone related condisorders; evaluating the effectiveness of treatment of a bone related condition; a transgenic animal comprising a first group of control condition; a transgenic animal comprising a first group of control condition; a treating bone related disorders; studying bone mass determinants; studying the modulation of bone mass; studying an effect of PAIGB on bone disorders; identifying an agent of the transgenic animal and a second group of control construct comprising multiple copies of DNA binding elements linked to a paid bone related disorders; but the struct of paids of bone and a linked to a DNA binding domain which is linked to an activation domain condition of paids gene the paids of condition of paids gene is induced. The PAIGB condition of paids gene is induced. The PAIGB condition of paids gene is induced. The PAIGB condition of paids of the nucleic acid is useful in ceptated disorders by gene therapy. The prut responsive gene may be conditioned in the paid of 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Claim 9; SEQ ID NO 6; 169pp; English

                                                                                                                                             The invention relates to a method of characterizing acute myelogenous leukemia (AML) in a patient by assaying for the overexpression of one or more BAALC transcripts in cells obtained from the patient, where an overexpression indicates that the patient has an aggressive form of AML. The methods, kits and probes are useful for characterizing acute or chronic myelogenous leukemia, or prostate cancer. They are also useful for detecting BAALC overexpression. This sequence corresponds to a BAALC (Brain and Acute Leukemia, Cytoplasmic) protein encoded by an alternative spliced RNA consisting of exons 1, 6 and 8.
                                                                                                                                                                                                                                                                                                                         Characterizing acute or chronic myelogenous leukemia, or prostate cancer in a patient comprises assaying for the overexpression of one or more BAALC transcripts in cells obtained from the patient.
                                                                                                                    Sequence 80 AA;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          CC screening agents for effectiveness in altering expression of the nucleic coid fragment; screening for agents useful for treating bone related CC disorders; evaluating the efficacy of a treatment of a bone related CC disorder in a subject; identifying polypeptides capable of binding to CC PAIGB; monitoring the effectiveness of treatment of a subject with a bone CC related agent; a transgenic animal comprising the DNA; an animal model CC for the study of bone density modulation comprising a first group of CC animals composed of the transgenic animal and a second group of control animals; studying bone mass determinants; studying the modulation of bone CC mass; studying bone mass determinants; studying the modulation of bone CC for treating bone related disorders; identifying an agent CC two constructs, the first construct formprising a ligand binding domain CC linked to a DNA binding domain which is linked to an activation domain CC all of which expression is driven by a constitutive promoter, the second CC construct comprising multiple copies of DNA binding elements linked to a CC construct comprising multiple copies of DNA binding elements linked to a CC construct comprising multiple copies of DNA, where upon the addition of chemical inducer, transcription of PAIGB gene is induced. The PAIGB colymucleotide has osteopathic activity. The PTH responsive gene may be considered disorders by gene therapy. The nucleic acid is useful in preparing a composition for diagnosing, treating on preventing bone created disorders, e.g., osteoporosis. This sequence represents a PTH cresponsive gene protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Query Match

The invention relates to a novel PTH responsive gene (PAIGB) fragment CC encoding a polypeptide. The invention further comprises: a chimmeric construct comprising the isolated nucleic acid fragment operatively CC linked to suitable regulatory sequences; a host cell transformed with the C chimmeric construct; a vector comprising the pulypeptide; acid fragment construct; a vector comprising the pulypeptide; acid fragment encoding the pulypeptide; amethod for C chaining a polypeptide; a composition for regulating bone or more epicopes of C a PAIGB polypeptide; a composition for regulating bone-forming activity; in a mammal comprising the mucleic acid fragment, polypeptide or antibody C; an agent that alters the expression of PAIGB gene or polypeptide; determining whether an agent alters the expression of paids many c cacid fragment; soreening for agents useful for treating bone related C disorders; evaluating the effectiveness in altering expression of the nucleic C acid fragment; soreening for agents useful for treating bone related C disorders; evaluating the effectiveness of treatment of a subject with a bone C pAIGB, monitoring the effectiveness of treatment of a subject with a bone C paids, monitoring the effectiveness of treatment of a subject with a bone C mass; studying bone mass determinants; studying the modulation comprising a first group of control C mass; studying bone mass determinants; studying the modulation of bone mass; studying bone related disorders; identifying whether an agent which has bone forming activity; and a stably transfected cell line comprising comprising multiple copies of DNA binding elements linked to a DNA binding domain which is linked to an activation domain C linked to a DNA binding domain which is linked to an activation domain c playmucleotide has osteopathic activity. The pTH responsive gene may be constituted as osteopathic activity. The process of the addition of classed to treat disorders by gene therapy. The nucleic acid is useful in useful in useful disorders, e.g., o

                                                                                                                                                          ঠ
                                                                                                                                                                                                                                                                                                    complementary strand of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the oligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end sequence and an oligonucleotide or polynucleotide which comprises a 3'-end sequence, where the oligonucleotide which comprises a 1'-end sequence, where the oligonucleotide comprises at least 15 nucleotides and the combination of the 5'-end sequence, 3'-end sequence is selected from those defined in the specification. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length cDNAs easily without any specialised methods. AAH03166 to AAH13628 and AAH13633 to AAH18742 represent human amino acid sequences; and AAH13639 to AAH13632 represent

The EST sequences are useful as prognostic markers of survival of cancer patients (high levels of EST-related mRNA are associated with a poor prognosis, specifically correlated with development of metastases); and for diagnosis and/or therapy of solid tumours, particularly of colon, stomach and breast. The present sequents as a variant of the HS1 protein shown in the exemplification of the

                                                                                                                                                                                                                                                               comprises the sequence of any of the genes that are up-regulated in specific cancers (e.g. about 1031 genes up-regulated in acute lymphocytic leukemia). ACC72641 to ACC72860 represent cancer related gene nucleotide sequences which encode the proteins given in ABR58521 to ABR58709. Also described: (1) determining the presence or absence of a pathological cell in a patient; (2) an expression vector comprising a nucleic acid molecule described above; (3) a host cell comprising the vector; (4) an isolated polypeptide, which is encoded by the nucleic acid; (5) an antibody that specifically binds the polypeptide of (4); (6) specifically targeting a compound to a pathological cell in a patient by administering to the patient the antibody above; and (7) a drug screening assay. The nucleic acid is useful as diagnostic markers or therapeutic targets. In particular, the nucleic acid is useful for diagnosing a pathology, e.g. cancer (e.g. cancer of the bone marrow, bladder, brain, breast, cervix, colon/rectum, kidney, lung, ovary, barcreas, prostate, skin and uterus), wounds, ischaemia, heart diseases, atherosclerosis and endometriosis. The nucleic acid is also useful in a patient for treating these

The invention relates to 971 novel human cDNA sequences (ADC29919-CC invention also relates to nucleic acid sequences over 99% identical with the novel human cDNAs. The invention additionally encompasses expression vectors and host cells comprising a nucleic acid of the invention; the recombinant production of a polypeptide of the invention; and matibody against a polypeptide of the invention; and methods of cinvention further discloses methods of peventing, and methods of invention further discloses methods of peventing, and methods of ameliorating a medical condition; kits comprising polymclectide probes and/or monoclonal antibodies for carrying out the methods of the invention or activity of the jolymclectide and/or polypeptide; and 767 contig sequences corresponding to the cDNA sequences of the invention (ADC31661-ADC32627) and the polypcptides encoded by the contigs (ADC332627) and the polypcptides of the invention are useful in diagnostics, drug screening, forensics, gene mapping, in the cidentification of mutations responsible for genetic disorders or other traits, for assessing biodiversity, and in producing many other types of data and products dependent on DNA and amino acid sequences. They are cidencer, wounds, burns, ulcers, osteoporosis, autoimmune diseases or cancer. The nucleic acids may also be used as hybridisation probes or primers, and in the recombinant production of a protein. The polypeptides or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New polynucleotide and polypeptide useful for diagnosing, preventing or treating conditions such as neurodegenerative diseases, anemias, platelet disorders, wounds, burns, ulcers, osteoporosis, autoimmune diseases or
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Haley-Vicente
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Zhou
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ulcers; osteoporosis; autoimmune disease; cancer; molecular weight marker; food supplement; antiparkinsonian; nootropic; neuroprotective; antiansemic; anticoagulant; thrombolytic; vulnerary; antiulcer; osteopathic; immunosuppressive; antiinflammatory; cytostation antiulcer; osteopathic; immunosuppressive; antiinflammatory; cytostations and the context of the conte

The invention relates to a method of characterizing acute myelogenous leukemia (AML) in a patient by assaying for the overexpression of one or more BAALC transcripts in cells obtained from the patient, where an overexpression indicates that the patient has an aggressive form of AML. The methods, kits and probes are useful for characterizing acute or chronic myelogenous leukemia, or prostate cancer. They are also useful
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              are

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   also useful in generating antibodies, as molecular weight markers, as food supplements. The present sequence represents a specifically imed human polypeptide sequence of the invention. Note: The sequence a for this patent did not form part of the printed specification, but obtained in electronic format directly from WIPO at .wipo.int/pub/published_pct_sequences.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Query Match
        The invention relates to a novel PTH responsive gene (PAIGB) fragment encoding a polypeptide. The invention further comprises: a chimeric construct comprising the isolated nucleic acid fragment operatively linked to suitable regulatory sequences; a host cell transformed with the chimeric construct; a vector comprising the nucleic acid fragment; obtaining a nucleic acid fragment encoding the polypeptide; a method for obtaining a polypeptide detecting the presence of the nucleic acid fragment; an antibody that specifically binds to one or more epitopes of a PAIGB polypeptide; a composition for regulating bone-forming activity in a mammal comprising the nucleic acid fragment, polypeptide, determining whether an agent alters the expression of PAIGB mRNA; screening separts for effectiveness in alters the expression of the nucleic acid fragment.
                                                                                                                                                                                                         Claim
                                                                                                                                                                                                                                   New nucleic acid fragment encoding a PAIGB polypeptide, useful preparing a composition for diagnosing, treating or preventing related disorders, e.g., osteoporosis.
                                                                                                                                                                                                                                                                                                          WPI;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                for detecting BAALC overexpression. This sequence corresponds (Brain and Acute Leukemia, Cytoplasmic) protein encoded by an spliced RNA consisting of exons 1, 6 and 8.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               á
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           CC disorders; evaluating the efficacy of a treatment of a bone related cd disorder in a subject; identifying polypeptides capable of binding to PAIGB; monitoring the effectiveness of treatment of a subject with a bone comparising the DNA; an animal model cfor the study of bone density modulation comprising the DNA; an animal model control comparising the DNA; an animal model control commals; studying bone mass determinants; studying a first group of control commals; studying bone mass determinants; studying whether an agent which for treating bone related disorders; identifying whether an agent constructs, the first construct comprising a ligand binding domain constructs, the first construct comprising a ligand binding domain construct comprising a diviven by a constitutive promoter, the second construct comprising multiple copies of DNA binding elements linked to a minimal promoter which is linked to pAIGB DDNA, where upon the addition of chemical inducer, transcription of PAIGB cDNA, where upon the addition construct compositing a composition for diagnosing. The PTH responsive gene may be used to treat disorders by gene therapy. The nucleic acid is useful in preparing a composition for diagnosing, treating or preventing bone related disorders, e.g., osteoporosis. This sequence represents a PTH cresponsive gene protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Matches 121;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   03-JUN-2004
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The methods, kits and probes are useful for characterizing acute or chronic myelogenous leukemia, or prostate cancer. They are also useful for detecting BALLC overexpression. This sequence corresponds to a BALLC (Brain and Acute Leukemia, Cytoplasmic) protein encoded by an alternative spliced RNA consisting of exons 1, 6 and 8.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to a method of characterizing acute myelogenous leukemia (AML) in a patient by assaying for the overexpression of one more BAALC transcripts in cells obtained from the patient, where an overexpression indicates that the patient has an aggressive form of AN overexpression indicates that the patient has an aggressive form of AN overexpression indicates that the patient has an aggressive form of AN overexpression indicates that the patient has an aggressive form of AN overexpression indicates that the patient has an aggressive form of AN overexpression indicates that the patient has an aggressive form of AN overexpression indicates that the patient has an aggressive form of AN overexpression indicates that the patient has an aggressive form of AN overexpression indicates that the patient has an aggressive form of AN overexpression indicates that the patient has an aggressive form of AN overexpression indicates that the patient has an aggressive form of AN overexpression indicates that the patient has an aggressive form of AN overexpression indicates that the patient has an aggressive form of AN overexpression indicates that the patient has an aggressive form of AN overexpression indicates that the patient has an aggressive form of AN overexpression indicates that the patient has an aggressive form of AN overexpression indicates that the patient has an aggressive form of AN overexpression indicates the patient has a 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Characterizing acute or chronic myelogenous leukemia, or prostate cancer in a patient comprises assaying for the overexpression of one or more BAALC transcripts in cells obtained from the patient.

The methods, kits and probes are useful for characterizing acute or chronic myelogenous leukemia, or prostate cancer. They are also useful for detecting BAALC overexpression. This sequence corresponds to a BAALC (Brain and Acute Leukemia, Cytoplasmic) protein encoded by an alternative spliced RNA consisting of exons 1, 6 and 8.

The invention relates to a novel PTH responsive gene (PAIGB) fragment encoding a polypeptide. The invention further comprises: a chimeric construct comprising the isolated nucleic acid fragment operatively linked to suitable regulatory sequences; a host cell transformed with the chimeric construct; a vector comprising the nucleic acid fragment; obtaining a nucleic acid fragment encoding the polypeptide; a method for obtaining a polypeptide; detecting the presence of the nucleic acid fragment; an antibody that specifically binds to one or more epitopes of a PAIGB polypeptide; a composition for regulating bone-forming activity in a mammal comprising the nucleic acid fragment, polypeptide or antibody; an agent that alters the expression of PAIGB gene or polypeptide; determining whether an agent alters the expression of PAIGB mRNA; screening agents for effectiveness in altering expression of the nucleic acid fragment; screening for agents useful for treating bone related
                                                                                                                                                                                                                                                                                   New nucleic acid fragment encoding a PAIGB polypeptide, useful preparing a composition for diagnosing, treating or preventing related disorders, e.g., osteoporosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       dioxygenase 10.12, polynucleotides encoding this polypeptide, a DNA recombination process to produce the polypeptide and antagonist against the polypeptide. The present invention also discloses the method of applying the polypeptide in treating various diseases, such as malignant tumours, inflammations, immunological diseases, haemopathy and HIV infection. The present sequence is the human dioxygenase 10.12.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 92

This sequence represents a PTH CC responsive gene protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Query Match

English

The invention relates to a method of characterizing acute myelogenous leukemia (AML) in a patient by assaying for the overexpression of one or more BRALC transcripts in cells obtained from the patient, where an overexpression indicates that the patient has an aggressive form of AML. The methods, kits and probes are useful for characterizing acute or chronic myelogenous leukemia, or prostate cancer. They are also useful for detecting BAALC overexpression. This sequence corresponds to a BAALC (Brain and Acute Leukemia, Cytoplasmic) protein encoded by an alternative

RNA consisting

of exons

6 and 8.

to a BAALC alternative

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      overexpression indicates that the patient has an aggressive form of AML. The methods, kits and probes are useful for characterizing acute or chronic myelogenous leukemia, or prostate cancer. They are also useful for detecting BAALC overexpression. This sequence corresponds to a BAALC (Brain and Acute Leukemia, Cytoplasmic) protein encoded by an alternative spliced RNA consisting of exons 1, 6 and 8.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The invention relates to a method of characterizing acute myelogenous leukemia (AML) in a patient by assaying for the overexpression of one more BAALC transcripts in cells obtained from the patient, where an
                                                                                                                                                                                                                                                                                                                    09-NOV-2001; 2001US-0348210P

The invention relates to a novel PTH responsive gene (PAIGB) fragment CC construct comprising the isolated nucleic acid fragment operatively CC linked to suitable regulatory sequences; a host cell transformed with the CC chimeric construct; a vector comprising the nucleic acid fragment; CC obtaining a nucleic acid fragment encoding the polypeptide; a method for CC ragment; an antibody that specifically binds to one or more epitopes of R PAIGB polypeptide; a composition for regulating bone-forming activity in a mammal comprising the nucleic acid fragment, polypeptide or antibody; an agent that alters the expression of PAIGB gene or polypeptide; a composition of PAIGB gene or polypeptide; a composition for regulating bone-forming activity in a mammal comprising the nucleic acid fragment, polypeptide; a composition of PAIGB gene or polypeptide; a creening for agent alters the expression of PAIGB mRNA; CC screening squates for effectiveness in altering expression of the nucleic disorders; evaluating the efficacy of a treatment of a bone related CC disorders; evaluating the efficacy of a treatment of a bone related CC disorder in a subject; identifying polypeptides capable of binding to pAIGB; monitoring the effectiveness of treatment of a subject with a bone related agent; a transgenic animal comprising a first group of control animals; studying bone mass determinants; studying the modulation of bone mass; studying bone mass determinants; studying the modulation of bone for treating bone related disorders; identifying whether an agent which the related disorders; identifying whether an agent which has bone forming activity; and a stably transfected cell line comprising ctwo constructs, the first construct comprising a ligand binding domain which is linked to an activation domain

ត្តនិត្តនិត្តនិត្តនិង្ស 문 S Query Match Best Local (Matches preparing a composition for diagnosing, treating or preventing bone related disorders, e.g., osteoporosis. This sequence represents a PTH responsive gene protein of the invention. all of which expression is driven by a constitutive promoter, the second construct comprising multiple copies of DNA binding elements linked to a minimal promoter which is linked to PAIGB CDNA, where upon the addition of chemical inducer, transcription of PAIGB gene is induced. The PAIGB polynucleotide has osteopathic activity. The PTH responsive gene may be used to treat disorders by gene therapy. The nucleic acid is useful in Sequence 54 AA; 51; Similarity Conservative 36.2%; 1: Score 278; DB 8; Pred. No. 9.2e-23; Mismatches Length 54 Indels 0, 54 Gaps 54 0

Sequence 2, Application US/09408647A

Patent No. 639858

GENERAL INFORMATION:
APPLICANT: Kobayashi, Donald
IITLE OF INVENTION: Chitinase Gene from Stenotrophomonas
IITLE OF INVENTION: maltophila
IITLE OF INVENTION: maltophila
IITLE OF INVENTION: maltophila
IITLE OF INVENTION: MICHOPHILA
IITLE OF INVENTION: MICHOPHILA
IITLE OF INVENTION: MICHOPHILA
IITLE OF INVENTION NUMBER: US/09/408,647A
ICURRENT FILING DATE: 1999-08-26
PRIOR APPLICATION NUMBER: 60/098,036
PRIOR APPLICATION NUMBER: 60/098,036
PRIOR FILING DATE: 1998-08-27

NUMBER OF SEQ ID NOS: 2
SCPIWARE: FastSEQ for Windows Version 4.0
ISEQ ID NO 2
LENGTH: 700
ITYPE: PRT
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 밁
